

Hyperbaric Oxygen Therapy

PAINLESS + GENTLE + EFFECTIVE + FDA APPROVED

Treatment Professionals Trust

Painless, gentle, and effective, HBOT is FDA-approved for the treatment of thirteen different illnesses, with success stories beyond the boundary of scientific endorsement being reported daily. For individuals living with chronic conditions such as diabetes and anemia, HBOT is capable of restoring life and functionality where past diagnosis would have indicated little to no hope of wellness.

While hyperbaric oxygen therapy (HBOT) may seem like a relatively new treatment, celebrities like Justin Beiber and Mark Wahlberg, and athletes have been utilizing and promoting HBOT for years. Professional athletes, including former NFL stars Terrell Owens and Tim Tebow, have spoken publicly about using hyperbaric oxygen therapy to expedite sport injury recovery.

Hyper Health HBOT chambers enable users to breathe both ambient O₂, and pure, pressurized oxygen.

HBOT is FDA approved for the treatment of 22 health conditions including non-healing wounds, stroke, burns, and many others.

What is Hyperbaric Oxygen Therapy?

Hyperbaric Oxygen Therapy (HBOT) is a medical treatment recognized by the American Medical Association (AMA) that administers pressurized oxygen via a specially designed chamber to deliver 100% pure oxygen to the body.

This pressurized chamber enables oxygen to dissolve within the blood and other bodily fluids effectively. As a result, users experience a type of "supercharging" to their body's regenerative capabilities, producing dramatic benefits.

When oxygen reaches damaged tissues or swollen arteries, it stimulates the release of healing chemicals, allowing the body to produce new cells and regenerate itself from the inside out.

Hyperbaric Oxygen Therapy Can Change Your Life

HyperHealth HBOT chambers enable users to breathe both ambient O2 and pure pressurized oxygen. Each unit includes an internal air conditioning system for comfort.

Painless + Gentle + Effective + FDA Approved

"Off Label" HBOT Treatment Uses

People of all ages use HBOT for cellular regeneration, promotion of blood flow, and to speed up the process of recovering from many conditions and injuries including:

- | | |
|---|--|
| Anoxic Brain Injury | Fibromyalgia |
| Arthritis | Inflammatory Bowel Disease |
| Cancer (Treatment Synergy) | Interstitial Cystitis |
